DETAILED ACTION

Response to Arguments

1. In view of the appeal brief filed on May 9, 2005, PROSECUTION IS HEREBY REOPENED. A new ground of rejection set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 9, 11, 19, and 21 are rejected under 35 U.S.C. 102(e) as being anticipated by Yamamoto et al (U.S. Patent No. 6,075,814)

Regarding claims 9 and 19, Yamamoto et al discloses a broadband communication system utilizing xDSL (col. 7, lines 17-20) packet based (FIG. 8, col. 20, lines 24-28) technologies comprising:

- an upstream xDSL modem (1004 in FIG. 7);

- a twisted pair (1012 in FIG. 7, col. 19, lines 9-10) connected to the upstream xDSL modem;

- a plurality of taps (e.g., nodes connecting xDSL modems 1001-1003 to the twisted pair 1012 of FIG. 7) defined along the twisted pair;

- a plurality of downstream xDSL modems (1001-1003 in FIG. 7) each downstream xDSL modem being in communication with a corresponding taps, the upstream and the plurality of downstream xDSL modems providing packet-based point-to-multipoint communication (col. 20, lines 23-27).

Wherein the plurality of downstream xDSL modems are operative to transmit to the upstream xDSL modem in contention-based protocol (col. 19, lines 21-29).

Regarding claims 11 and 21, refer to the discussion for claim 9. Yamamoto et al further discloses that the upstream xDSL modem transmits a packet to more than one downstream xDSL modems, i.e., the upstream xDSL modem could transmit a packet to all downstream modems connected to the twisted pair. Therefore, Yamamoto et al teaches a broadcast-based protocol as recited in claim.
